

KoruFlux

Build. Transition. Strategize. Land. — Web3 · AI · Data · Market Entry

Nairobi-based technology and strategy consultancy operating at the intersection of Web3, AI, and African market entry. We help companies turn emerging technologies into working systems inside Africa's fastest-growing digital economy grounded in data, not guesswork.

*Nairobi-based technology and strategy consulting firm helping companies design, evaluate, and scale Web3 and AI-driven systems across African and emerging markets.

We operate at the intersection of engineering, data intelligence, and market execution helping teams make clear decisions in complex, high-uncertainty environments.

*

Service Pillars

Build:

We design and guide the development of production-ready Web3 and AI systems

- Smart contract architecture (Solidity, Rust)
- DeFi, NFT & DAO system design
- AI product integration strategy
- Data pipeline architecture
- LLM system planning

Transition:

We support companies moving from Web2 to Web3 and AI-enabled infrastructure

- System audits and readiness assessment
- Architecture redesign advisory
- Tokenisation feasibility strategy
- Blockchain integration planning
- AI automation roadmap
- Technical team structuring

Strategize:

We design data-backed frameworks for product and market decisions

- Market entry analysis (Africa & global)
- Tokenomics and incentive design
- Competitive intelligence
- Growth strategy frameworks
- Investor narrative development

Land:

We guide companies entering and operating in African markets with technical and regulatory context

- Market entry strategy (Kenya & East Africa)
- Regulatory and compliance navigation
- Local ecosystem mapping
- Partnership strategy
- Fractional CTO / technical advisory

Engagement Packages

Sprint (Project)	Retainer (Advisory)	Integrated (Full Programme)
4–8 wks Defined scope Single-pillar Strategy/Builds	Monthly Ongoing access Market intelligence Fractional leadership	8–16 wks Multi-pillar Build + Strat + Land Embedded team

Why KoruFlux

- **Nairobi HQ:** Africa's tech capital gateway to East & Central Africa.
- **Rare Skill Stack:** Web3 + AI + Data + Strategy in one integrated team.
- **Data Backbone:** Recommendations built on market and on-chain data.
- **Bridge Positioning:** Fluent in both Web3-native and corporate enterprise language.

Build the future. From Africa, for the world.

hello@koruflux.io · Nairobi, Kenya

To pull off the "Sovereign Liaison" model, you need to move beyond standard "crypto news" and start consuming the same intelligence as hedge fund managers and diplomats. Your value is **Geopolitical Alpha**—knowing how a change in a country's

leadership or a central bank's digital currency (CBDC) stance affects a protocol's bottom line.

Here are the specific tools and research pillars to build your "Serious Authority."

1. The Intelligence Stack (Tools)

To stay ahead of the curve, you need data that tracks the intersection of law, money, and power.

- **TRM Labs / Chainalysis Reports:** Don't just follow the tech; follow the **Policy**. Their "Geography of Cryptocurrency" reports are the gold standard for understanding regional adoption and illicit finance risks (the #1 fear of regulators).
- **The Block Pro (Policy & Regulation):** Specifically their research on global VASP (Virtual Asset Service Provider) licensing.
- **Vixio / Regulatory Intelligence:** A professional tool used by banks to track global regulatory changes in real-time.
- **Oxford Analytica / Eurasia Group:** These are "Macro IR" firms. Reading their free insights will teach you how to talk about "country risk" like a diplomat.
- **World Bank / IMF "Fintech" Series:** They frequently publish papers on how emerging markets should regulate crypto. This is your "enemy/ally" playbook—know what the regulators are being told by these institutions.

2. High-Depth Research Topics (Your "Authority" Pillars)

If you want to be the "Trust Layer," you must be able to speak fluently on these four intersections:

A. Jurisdictional Arbitrage & Competition

- **Topic:** Why do protocols move from Singapore to the UAE? It's not just "lower taxes."
- **Focus:** Compare **MiCA (EU)** vs. **VARA (Dubai)** vs. **MAS (Singapore)**. Understand the "passporting" rights—how being licensed in one country opens doors in ten others.

B. The "Sovereign Web3" Thesis

- **Topic:** How nation-states use crypto to bypass or enhance their financial systems.
- **Focus:** Study the **BRICS** digital payment initiatives and how Layer 1 blockchains can act as national infrastructure. This is the ultimate IR/Web3 overlap.

C. RWA (Real World Assets) & Local Law

- **Topic:** You cannot put a house or a bond on-chain without a local legal "wrapper."
- **Focus:** Learn the mechanics of **Special Purpose Vehicles (SPVs)** and how common law (UK/US) vs. civil law jurisdictions treat digital ownership.

D. The "Grey Market" Transition

- **Topic:** How "unregulated" crypto-economies (common in Africa/SEA) move into "regulated" institutional frameworks.
- **Focus:** The FATF (Financial Action Task Force) **"Travel Rule."** This is the single biggest headache for global protocols. If you know how to help them comply without killing their UX, you are indispensable.

3. Structural Content: Your "Social Media" Reading List

To sound like a "Global Connector," curate your feed with these types of thinkers:

- **The Economists:** Follow people who discuss the "Dollarization" vs. "Stablecoin" debate.
- **The Legal Scholars:** Follow partners at firms like *A&O Shearman* or *Gunderson Dettmer* who specialize in cross-border fintech.
- **The IR Realists:** Follow strategists who analyze how the "US-China Tech War" forces protocols to pick sides in neutral markets like Kenya or the UAE.

4. Immediate "Boots on the Ground" Task

To prove you are an **Operator** (as Theo suggested), create a **"Market Entry Matrix"** for 3 key regions (e.g., UAE, Kenya, and Hong Kong).

Metric	UAE (VARA)	Kenya (CMA/CBK)	Hong Kong (SFC)
Political Posture	Highly Proactive / Top-Down	Cautious / Bottom-Up	Strategic / Pivot from China
Key Gatekeeper	VARA / ADGM	Central Bank / Capital Markets	SFC / HKMA

Primary Risk	"Goldilocks" Regulation	Currency Volatility	Geopolitical (US-China)
Best Entry For...	Institutional DeFi	Retail/Payments	RWA / Wealth Mgmt

Pro Tip: Post a snippet of this matrix on LinkedIn with the caption: *"Entering a market is easy. Staying there is a diplomatic exercise. Here is how we map the 'Enforcement Posture' for our protocol partners."*

Which of these regions or topics do you want to build your first "Sovereign Brief" on? I can help you draft the executive summary for it.
